

Unlocking the OSEE Core Framework

Roberto Escobar

Boeing Mesa, AZ

Objective

 Inform developers what the OSEE application framework services offer

 For more information http://www.eclipse.org/osee

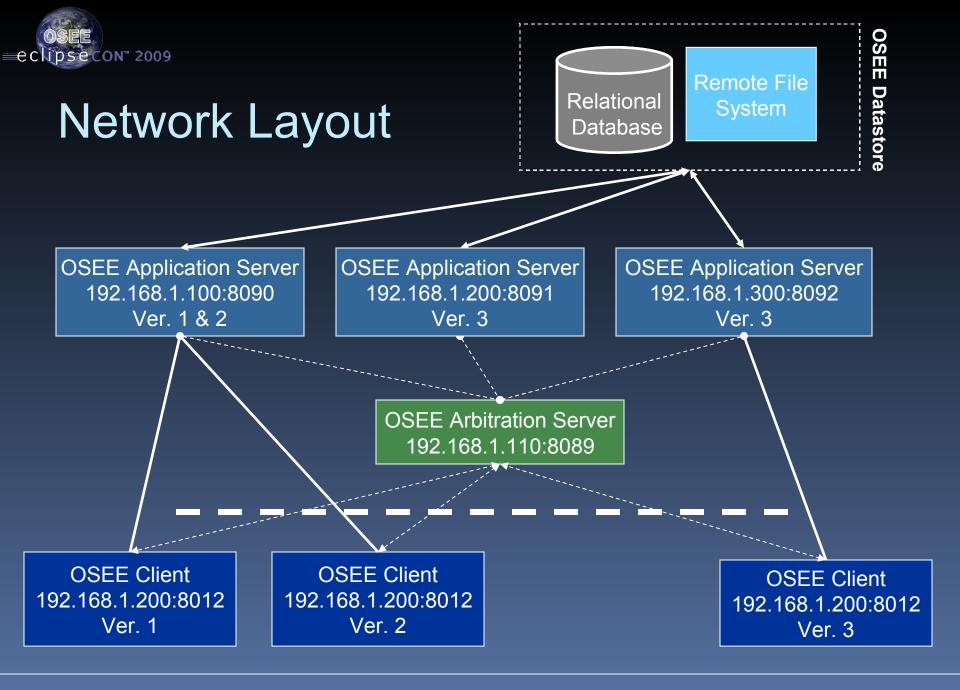

What is OSEE?

- OSEE is a tightly integrated environment designed to support lean engineering principles across a product's full life-cycle in the context of an overall systems engineering approach
- OSEE has been deployed on Boeing's next generation Attack Helicopter
 - 300 users
 - Managing ~300,000 Artifacts
 - ~250 Active Branches

OSEE Framework Services

- Providing the following facilities:
 - Transaction-based object-oriented persistence layer
 - Dynamic and strongly types artifact model
 - Advanced version control including multi-level branching
 - Variant management
 - Database independent import/export
 - Subject-based and object-based access control
 - Session management and authentication service
 - Multi-client event notification service
 - Extensible tagging and searching capabilities
 - Task scheduling framework

Artifact Types

- <<default>> : Artifact
- <<default>>:Name
- <<default>>:Annotation
- <<default>>:Static Id

🚵 <<default>> : Requirement

🚵 <<default>>:Name

🞥 <<default>>:Annotation

🚵 <<default>>:Static Id

- <<default>>:Subsystem
- <<default>>:Qualification Method
- <<default>>:Safety Criticality
- <<default>>:Word Template Content
- <<default>>:Word Ole Data
- <<default>>:Page Type
- <<default>>:Imported Paragraph Number

Inherited Attributes

🦄 <<default>> : System Requirement

👫 <<default>>:Name

& <<default>>:Annotation

🐕 <<default>>:Static Id

🖟 <<default>>:Subsystem

<<default>>:Qualification Method

<<default>>:Safety Criticality

🗽 <<default>>:Word Template Content

🚵 <<default>>:Page Type

💒 <<default>>:Imported Paragraph Number

<<default>>:Crew Interface Requirement

<<default>>:System Security Requirement

<<default>>:CSCI

<<default>>:Training Effectivity

🐂 <<default>> : Subsystem Requirement

🎎 <<default>>:Name

& <<default>>:Annotation

👫 <<default>>:Static Id

<<default>>:Subsystem

& <<default>>:Qualification Method

🔐 <<default>>:Safety Criticality

🗽 <<default>>:Word Template Content

💦 <<default>>:Word Ole Data

🚵 <<default>>:Page Type

💦 <<default>>:Imported Paragraph Number

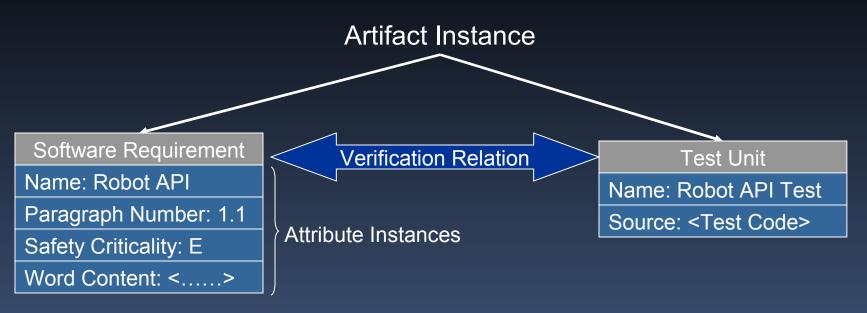

<<default>>:Legacy Id

Inherited Attributes

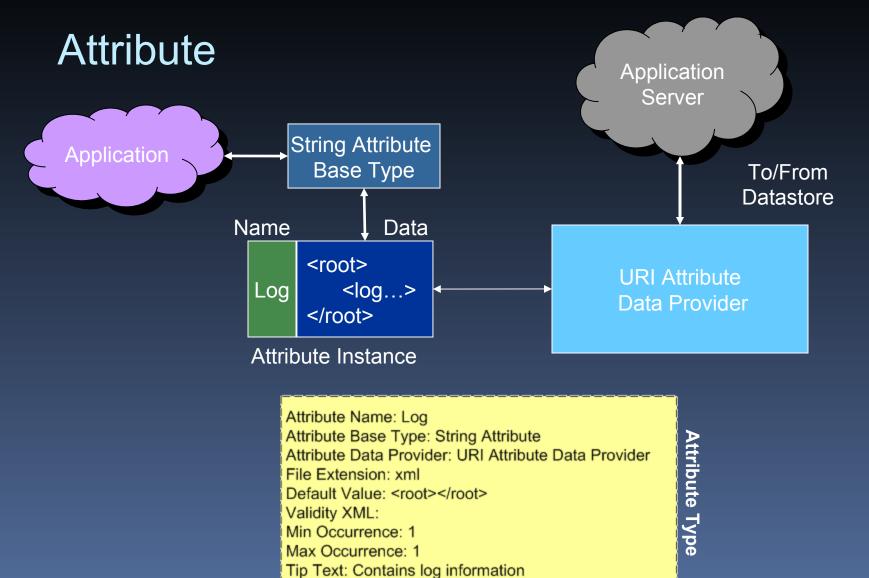

Simple, User-definable Data Model

Artifacts

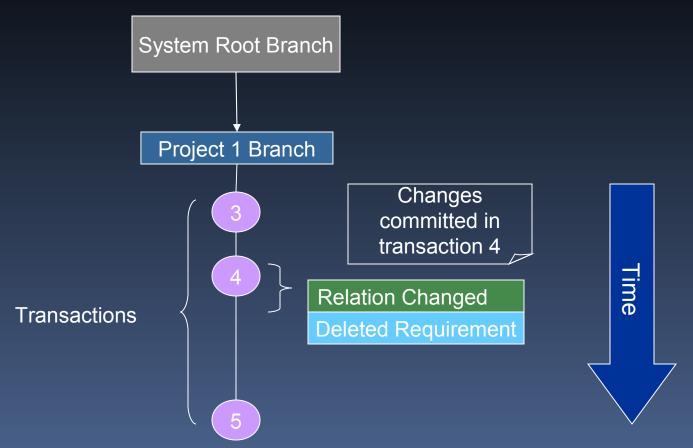

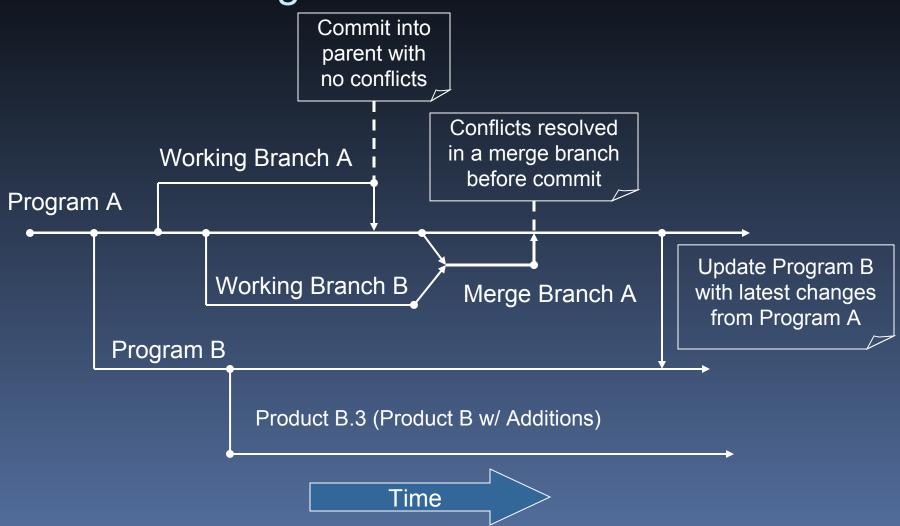

Transactions and Branches

Variant Management

Example

- Aircraft Maintenance Log Book
 - Stores multi-program historical flight information
 - Uses authentication and access control
 - Using Artifact search API to easily access data
 - Easily pluggable with Eclipse plug-ins
 - For example using BIRT to chart flight performance indicators
 - Flight data analysis
